

FULL STACK WEB DEVELOPMENT

Experiment No. 01

Design Static Webpage using HTML Components

1. Basic Information

Experiment No.	01
Date	
Title	Design Static Webpage using HTML Components

Course Outcome

Design Static Webpage using HTML Components	CO1
---	-----

2. Objective / Aim

To design and implement a static webpage using HTML components and semantic HTML5 elements to create a clear and organized document structure.

3. System Requirements

- Hardware: Processor – Core i5 or equivalent, RAM – 8 GB or above, Storage – 10 GB free space.
- Software: Windows 11 / Linux, Visual Studio Code, Google Chrome or any modern web browser.
- Technology: HTML5.

4. Architecture / Design

The webpage is designed using HTML5 semantic and structural elements. The main structure contains a header, navigation links, home section, articles, contact form, sidebar and footer.

Header → Navigation → Main Content → Articles + Form → Sidebar → Footer

5. Source Code

File: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>Pure Semantic HTML Static Webpage</title>
</head>
<body>

  <header>
    <table width="100%" border="0" cellspacing="0" cellpadding="10">
      <tr>
        <td><h1>StaticWeb</h1></td>
        <td align="right">
          <nav>
            <a href="#home">Home</a> &nbsp;|&nbsp;&nbsp;
            <a href="#articles">Articles</a> &nbsp;|&nbsp;&nbsp;
            <a href="#about">About</a> &nbsp;|&nbsp;&nbsp;
            <a href="#contact">Contact Us</a>
          </nav>
        </td>
      </tr>
    </table>
  </header>

  <hr>
```

```

<section id="home">
  <center>
    <h2>Semantic Structures Without CSS</h2>
    <p>This layout uses raw HTML components to build an organized document hierarchy.</p>
    <p><a href="#articles"><b>Read Our Articles Below &darr;</b></a></p>
  </center>
</section>

<hr>

<table width="100%" border="0" cellspacing="0" cellpadding="20">
  <tr valign="top">

    <td width="70%">
      <main id="articles">

        <article>
          <h2>1. Core Structural Tags</h2>
          <p>Published: July 7, 2026</p>
          <p>Semantic elements such as &lt;main&gt;, &lt;article&gt; and &lt;section&gt;
            clearly describe the structure of the webpage.</p>
          <p>Using raw browser defaults provides a simple and clear document structure.</p>
        </article>

        <br><hr><br>

        <article>
          <h2>2. Native Interaction Elements</h2>
          <p>Published: July 5, 2026</p>
          <p>HTML provides native elements for collecting and submitting structured information.</p>

          <h3>Interactive Demonstration Forms</h3>
          <form id="contact" action="#" method="post">
            <fieldset>
              <legend><b>User Inquiry Form</b></legend>
              <p><label for="name">Full Name: </label>
                <input type="text" id="name" name="username" required placeholder="John Doe"></p>
              <p><label for="email">Email Address: </label>
                <input type="email" id="email" name="useremail" required></p>
              <p><label for="topic">Inquiry Topic: </label>
                <select id="topic" name="usertopic">
                  <option value="general">General Feedback</option>
                  <option value="technical">Technical Architecture</option>
                  <option value="academics">Academic Curriculum</option>
                </select></p>
              <p><label for="message">Message Details:</label><br>
                <textarea id="message" name="usermessage" rows="5" cols="40"
                  placeholder="Type your notes here..."></textarea></p>
              <p><input type="submit" value="Submit Form Data">
                <input type="reset" value="Clear Entries"></p>
            </fieldset>
          </form>
        </article>

      </main>
    </td>

    <td width="30%" bgcolor="#f4f4f4">
      <aside id="about">
        <h3>Document References</h3>
        <p>Static pages map data out directly without real-time database queries.</p>
        <h4>Core Benefits:</h4>
        <ul>
          <li>Instant browser painting</li>
          <li>Low memory footprints</li>
          <li>High data compatibility</li>
        </ul>
        <h4>Required Components:</h4>
        <ol>
          <li>Document Type Definition</li>
          <li>Semantic Wrapper Blocks</li>
          <li>Data Input Control Interfaces</li>
        </ol>
      </aside>
    </td>
  </tr>
</table>

```

```

        </tr>
    </table>

    <hr>

    <footer>

            <p>&copy; 2026 Pure HTML Architecture. Assembled completely without style configurations.</p>
        </center>
    </footer>

</body>
</html>

```

6. Compilation / Execution Steps

1. Create a folder and save the code as index.html.
2. Open the folder in Visual Studio Code.
3. Open index.html in Google Chrome or another modern web browser.
4. Observe the webpage, navigation links, articles, sidebar and user inquiry form.

7. Expected Output / Screenshots

Paste the screenshots of the executed webpage below.

Screenshot 1: Static Webpage

Screenshot 2: User Inquiry Form

When you omit cascading style sheets entirely, the semantic markup handles all of the structural heavy lifting. Elements like `<main>`, `<article>`, and `<section>` tell screen readers and web scrapers exactly how information flows.

Using raw browser defaults ensures excellent loading performance, perfect accessibility compliance, and absolute structural clarity.

2. Native Interaction Elements

Published: July 5, 2026

Browsers come equipped with excellent interactive elements by default. We can capture text inputs, provide multiple-choice configurations, and submit structured information to backend parsers using pure markup.

Interactive Demonstration Forms

User Inquiry Form

Full Name:

Email Address:

Inquiry Topic:

Message Details:

Core Benefits:

- Instant browser painting
- Low memory footprints
- High data compatibility

Required Components:

1. Document Type Definition
2. Semantic Wrapper Blocks
3. Data Input Control Interfaces

© 2026 Pure HTML Architecture. Assembled completely without style configurations.

8. Result / Conclusion

The static webpage was successfully designed and implemented using HTML5 components and semantic elements. The webpage was executed successfully in a web browser with navigation, articles, lists, a sidebar and an interactive form.
