

LABORATORY OBSERVATION / RECORD

Course: Full Stack Web Development

Course Code: 23CM4121

TASK NO.: 1

Develop a Static College Information Webpage Using HTML

Student Name	Ch. Venu Gopal Reddy
Roll No.	A24126552078
College	Anil Neerukonda Institute of Technology and Sciences (ANITS)
Date	31-07-2026

Full Stack Web Development Laboratory

1. TITLE

Develop a Static College Information Webpage Using HTML

2. AIM

To develop a static college information webpage using HTML and demonstrate basic HTML elements, tables, images, forms, hyperlinks, semantic elements, multimedia elements and HTML5 input types.

3. OBJECTIVE

- To understand the basic structure of an HTML document.
- To use headings, paragraphs and text-formatting elements.
- To create ordered and unordered lists and hyperlinks.
- To display student information using an HTML table.
- To add images to a webpage.
- To create a student registration form using different form controls.
- To use HTML5 semantic elements such as header, nav, section, article and footer.
- To demonstrate audio, video and different HTML5 input types.

4. THEORY

HTML (HyperText Markup Language) is used to create the structure and content of web pages. An HTML document is made up of elements represented by tags. The webpage developed in this task combines basic HTML features with HTML5 features in a single College Information Portal.

The main concepts demonstrated are:

- Headings and paragraphs for presenting college information.
- Bold, italic, underline, subscript and superscript text formatting.
- Ordered and unordered lists for courses and campus facilities.
- Hyperlinks for accessing external websites.
- Tables for displaying structured student information.
- Images for the college logo and campus.
- Forms with text, email, password, radio button, checkbox, select and textarea controls.
- Semantic elements for giving meaningful structure to the page.
- Audio and video elements for multimedia content.
- HTML5 input types such as email, date, number, color and range.

5. PROCEDURE

1. Create the HTML document and define the basic HTML structure.
2. Add the college information and basic text-formatting examples.
3. Create ordered and unordered lists for courses and campus facilities.
4. Add hyperlinks to the ANITS website and Google.
5. Create a student details table.

6. Insert the college logo and campus image.
7. Create a student registration form with different input controls.
8. Add HTML5 semantic elements including header, nav, section, article and footer.
9. Add audio and video elements.
10. Add HTML5 input types such as email, date, number, color and range.
11. Save the webpage as an HTML file and open it in a web browser.
12. Verify the displayed content and form controls using suitable test cases.

6. PROGRAM

File: task1final.html

The following is the complete HTML program used for the task:

```
<!DOCTYPE html>

7. CODE EXPLANATION

Element	Purpose
<!DOCTYPE html>	Declares the document as an HTML5 document.
<head>	Contains document metadata such as character encoding, viewport settings and the page title.
<h1>, <h2>, <h3>	Used to create headings and organize the webpage into sections.
<p>	Defines paragraphs of text.
, <i>, <u>	Demonstrate bold, italic and underlined text.
<sub>, <sup>	Display subscript and superscript text.
, ,	Create ordered and unordered lists.
<a>	Creates hyperlinks to external websites.
<table>, <tr>, <th>, <td>	Create and populate the student details table.
	Displays the college logo and campus image.
<form>	Groups controls used for collecting student information.
<input>	Provides different form controls such as text, email, password, radio, checkbox, submit and reset.
<select>, <option>	Create a branch selection dropdown.
<textarea>	Provides a multi-line field for comments.
<header>, <nav>, <section>, <article>, <footer>	HTML5 semantic elements used to organize the webpage.
<audio>, <video>	Provide controls for multimedia content.

8. TEST CASES AND EXECUTION DATA

The following test cases can be used to verify the main parts of the webpage. Actual screenshots of the browser output can be inserted in the Output section.

Test Case	Test / Input	Expected Result	Actual Result / Status
TC-01	Open the HTML file	College Information Portal and Part A content should be displayed	To be filled after execution
TC-02	Check lists and hyperlinks	Courses, facilities and useful website links should be displayed	To be filled after execution
TC-03	Check table and images	Student table, college logo and campus image should be displayed	To be filled after execution
TC-04	Check registration form	Form controls such as text, email, password, radio, checkbox, dropdown and textarea should be displayed	To be filled after execution

TC-05	Check HTML5 section	Semantic elements and HTML5 input controls should be displayed	To be filled after execution
TC-06	Check multimedia	Audio and video controls should be displayed when the referenced media files are available at the specified paths	To be filled after execution

9. OUTPUT

Insert the actual screenshots of the webpage in the spaces below. The screenshots should show the browser output and important sections of the application.

Output 1: Complete College Information Portal

Output 2: Student Details Table and Images

College Information Portal

127.0.0.1:5500/01-Observation/obsTask1_static_webpage/src/task1final.html

Part B - Tables and Images

Student Details

Roll No	Name	Branch	Email
A24126552001	Arjun	CSE	arjun@gmail.com
A24126552015	Keerthi	IT	keerthi@gmail.com
A24126552028	Rohit	ECE	rohit@gmail.com

College Logo

College Campus

Output 3: Student Registration Form

Part C - Student Registration Form

Name:

Email:

Password:

Gender: ☒ Male ☐ Female ☐ Other

Hobbies: ☐ Reading ☒ Music ☒ Coding

Branch:

Comments:

Output 4: HTML5 Features, Media and Input Types

10. OBSERVATION / NOTE

The HTML program contains audio and video source paths under a 'media' folder. Before taking the final screenshots, the referenced media files should be placed at the corresponding paths (or the source paths in the HTML should be updated) so that the multimedia section can be verified correctly.

The document intentionally records the program as submitted. Any final execution status should be filled based on the actual browser output.

11. RESULT

Thus, a static College Information Portal was developed using HTML. The webpage demonstrates basic HTML elements, lists, hyperlinks, tables, images, a student registration form, HTML5 semantic elements, multimedia elements and HTML5 input types. The final execution status can be confirmed using the test cases and screenshots.

12. SUBMISSION CONTENT

The GitHub project can contain the following files/folders:

- task1final.html – final integrated webpage.
- Part_A.html – Part A implementation.
- Part_B.html – Part B implementation.
- Part_C.html – Part C implementation.
- Part_D.html – Part D implementation.
- images/ – college logo, campus image and other media files used by the project.
